

College of Professional Studies

DID YOU KNOW?

Indiana Tech is accredited by the Higher Learning Commission, the largest regional accreditor of degree-granting, post-secondary educational institutions in the United States.

Psychology, M.S.

indianatech.edu/programs/psychology-ms

With a Master of Science in Psychology, you will be able to apply psychological knowledge and research to real-world situations in a variety of settings. Tech’s coursework provides students with a solid foundation in psychological principles, theories, practices and research. Although the program does not currently lead to licensure for independent practice in psychology, it may meet several of the requirements for such licensure depending on the state. Graduates are well prepared to enhance their employment opportunities or pursue a doctoral degree.

Those holding a graduate degree in psychology bring a wealth of advanced psychological knowledge and experience to the table. With an appreciation for diversity, strong academic writing skills and a thorough understanding of thoughts and behaviors, these psychology professionals are well equipped for career advancement and helping others.

Student Learning Outcomes

Upon completion of the Master of Science in Psychology, you will be able to:

- Write professionally using proper APA style
- Examine how thoughts and behaviors impact self and others
- Practice ethical decision making
- Compare and contrast the major theories and principles of psychological concepts
- Respect and appreciate diversity and differences
- Utilize strong communication and problem-solving skills
- Aid clients in understanding themselves and others, as well as understanding how to reach their full potential and meet goals
- Act as a case manager for the care and treat of clients, including coordinating social services
- Distinguish between different research methodologies in the field of psychology
